Topics in AutoCAD include the following: create and update drawings, detailed drawing creation and annotation, present and print drawings, send drawings over the Internet, export drawings into various formats (including the DXF exchange format), create and print labels and postage stamps. Scenes, layers and blocks AutoCAD has a layer system. A layer is a set of 2D objects, such as lines, circles, splines, or surfaces, that are selected and placed on a drawing sheet as a collection. In contrast to layers, blocks are used to group and place together 2D or 3D objects on a sheet. A layer is a grouping of objects, and can be seen as a collection of similar objects. The boundaries of layers are very important. If a drawing is viewed using layers, it can be seen that the objects can be sliced. Layers and blocks are a quick way to perform operations on all or selected objects on a drawing. The layers can be thought of as text lines, and a layer's properties such as line color and line style can be adjusted. Unlike layers, blocks are used to group and place together 2D or 3D objects on a sheet. Objects in a block can be moved and resized together. Creating a new layer All objects on a sheet are on layer 0. To create a new layer, click on the layer 1 bar. Click on a new layer name and then create the new layer. Clipping Layers can be "clipped" to other layers. In AutoCAD, objects within a clipping boundary are not visible. When creating a new layer, the default layer is Layer 1. This layer can be used as a clipping boundary. When another layer is placed above Layer 1, it becomes the clipping boundary for objects within that layer. Objects can be clipped to the default layer or to another layer. The default layer can be found by clicking on the layer 1 bar. Altering a layer's properties The properties for each layer can be modified by clicking on the layer's properties bar and adjusting the properties. Layer 1 is the default layer. When a new layer is placed above Layer 1, the properties for that new layer are used as the default for the new layer. When a layer is deleted, all its properties are lost. Altering the properties of an individual layer To alter a single layer's properties, click on the Properties button for the selected layer. The Properties dialog 5b5f913d15
